

SkimOIL's new Electric MarineVAP Evaporators NO DISCHARGE IS GOOD DISCHARGE!

How About Nothing Overboard?

SkimOil Inc. just introduced the next generation electric MarineVAP evaporators for automatically evaporating away bilge water, gray water and even treated black water.

With far greater control and monitoring of the whole process, the new MarineVAP with improved safety features: The materials, and controls technology / capabilities have caught up with the times, just in time for Subchapter M. Got water? Yes you do!

NO DISCHARGE IS A GOOD DISCHARGE How about nothing overboard?

**Bilge Water? Grey Water? Treated Black Water?
GONE!**

The new MarineVAP was designed to safely, quickly and more efficiently evaporate up to 25 gallons per hour, while using far less electric power.

Unlike the previous MarineVAP these new systems are highly controlled, automated and monitored. With stainless steel tanks, AND special low-density heating elements that are staged to go on/off sequentially, when the operating temperature is reached, only the number of heating elements needed to maintain efficient operation are powered on.

This system minimizes power surges, helps balance the load AND greatly reduces power consumption which was always a limiting factor on electric powered evaporators.

The MarineVAP system is a complete ZERO LIQUID DISCHARGE, smart system for on-board AUTOMATIC evaporation of bilge water, gray water and even treated black water.

With only 1 moving part the new BUBBA PROOF MarineVAP = "NO DISCHARGE ZONE".

Available in 7 sizes to fit all boats and needs (up to 25 GPH evaporation rate).
